Beyond Tokenization

This is a test equation:

$$\Delta \text{ MeanLogP} = \sum_{t=1}^{|W|} \log P(w_t \mid W \setminus \{w_t\}; \Theta) \tag{1}$$

As shown in Equation 1, Greek letters ρ, Δ, α render correctly, and Hindi words **पानी** vs **पानि** and **महत्वपूर्ण** vs **महत्त्वपूर्ण** display without issues.

Model Architecture

- MuRIL (`google/muril-base-cased`): WordPiece, 197,285-token vocabulary
- XLM-RoBERTa (`FacebookAI/xlm-roberta-base`): BPE SentencePiece, 250,002-token vocabulary

Statistics

The cross-model Spearman rank correlation was $r_s = +0.4408, p < 10^{-9}$.
